

EUPESMA 2023

Pan-European Survey on SMA and Clinical Trials

**What would you like to see
in future clinical trials for SMA?**

Whether or not you have ever participated in a clinical trial, let us hear from you!

The development of new and improved treatments for SMA depends on clinical trials. Still, participating in clinical trials can be a delicate decision and a challenging experience.

**We want to advocate for clinical trials
that are relevant, worthy, and tailored
to the needs of people living with SMA!**

Who can participate?

- Any person living with SMA (16 or older)
- Parents or caretakers of children and adults with SMA
- **With or without** experience with clinical trials

This survey is part of SMA Europe's EUPESMA biannual survey series that detects the unmet needs and wants of the SMA community. SMA Europe publishes results from EUPESMA surveys in accredited scientific journals to be used for patient advocacy in Europe and beyond.
